

Pump Fed Grinder

Our range of high performance pump fed grinding heads is designed to ensure excellent particle definition and temperature control even with viscous products.

Field of Application

Pump fed grinding heads are especially suitable where excellent particle size control and minimum temperature increase and high capacity are needed.

Design and Benefits

Our advanced pump-grinding technology offers many benefits compared to conventional grinders. The constant flow rate generated by the feed pump, eliminates “back wash” and ensures a superb clean cut. When feed pump is equipped with variable speed, the pump allows for controlled particle length.

The grinding heads are available in five standard sizes ranging from 200 mm up to 550 mm in holeplate diameter.

Haarslev Industries

Haarslev Industries is one of the world’s leading companies within handling and processing of by-products from food-related industries.

Many years of experience has given us competence in designing, manufacturing and installing processing equipment and systems for related industries, which process meat by-products or convert raw material into finished goods.

Advantages

- Great flexibility. It can be fed in many different ways such as by pump alone, by mixer with pump, by silo with pump etc.
- Larger models are equally suitable for both fresh and frozen materials.
- Low cost of ownership due to unique design of lining/knife housing.
- All weldings in the product zone are for optimum cleaning.
- Belt-driven transmission ensuring low noise level.

Optional Extras

- A unique hard particle separator system is available for most of the grinders. The system automatically collects and removes any hard particles that are larger than the final holeplate openings, from ground meats.
- Specific applications require special tools, thus we offer a full selection of options for our grinding equipment for better flexibility and product quality.

Hinged safety guard for knife housing swings open for easy access to knife set.

Type	Applications
HF200P	Fresh meat grinding and fat grinding
HF250P	Fresh meat grinding, fat grinding and bone grinding
HF300P	Fresh meat grinding, grinding of pre-broken frozen meat blocks and of thin meat blocks, fat grinding and bone grinding
HF400P	Fresh meat grinding, grinding of frozen meat blocks, fat grinding and bone grinding
HF550P	Fresh meat grinding, frozen meat grinding, fat grinding and bone grinding

We reserve the right to alter the specifications at any time without prior notice.
