

Haarslev Chemical Scrubber

Haarslev Industries knows the demands of several industries which makes us able to develop, design and manufacture a wide range of high efficient odour treatment systems for the following industries:

- Processing of meat and fish by-products
- Water treatment plants
- Agrochemical industry
- Animal feed industry
- Food industries in general

In these types of industries odour perception is mainly due to the presence of volatile

organic compounds (VOCs), which are qualitatively and quantitatively very diverse.

Odour treatment systems from Haarslev Industries are installed all over the world. We offer our customers tailor-made solutions to meet the specific needs as well as highly skilled technical assistance.

Absorption by scrubbing

Haarslev scrubbers are designed in either single or multiple stage systems which utilize reagents to effectively reduce the emissions of VOCs. In each case we select the

reagent combinations and dimension the equipment on a basis of the flow rates to be handled and the gas composition.

Haarslev Industries

Haarslev Industries is one of the world's leading suppliers of a wide range of equipment for applications within thermal drying, evaporation and mechanical dewatering. We offer our products as turn-key plants and as single components.

Design

Units are available in stainless steel or fiberglass with standard or extended packing depths. Both automatic and manual chemical control and monitoring systems are available.

Main Particulars

- Stainless steel or fiberglass construction
- Flanged inlet and discharge connections
- Standard pipe connections
- Blade style mist eliminators and single spray nozzle for reduced maintenance
- Integral recirculation pump
- Recirculation pumps constructed with stainless steel parts and mechanical seals
- Fan in contact with the air stream is manufactured from stainless steel

We reserve the right to alter the specifications at any time without prior notice.
